

# WoodSafe® clinical waste containers – Reach your climate targets

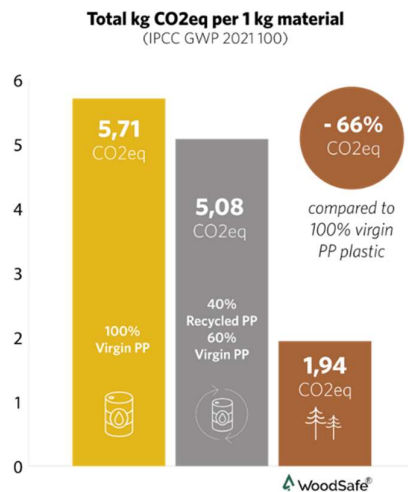

## About WoodSafe®

WoodSafe® is an innovative range of clinical waste containers made of renewable raw materials from the forest – **66% reduction of CO<sub>2</sub>-emissions**.

- 0,5 liter, 2 liter, 3 liter, 6 liter, 12 liter, 25 liter and 50 liter
- Up to 66% reduction of CO<sub>2</sub>-emissions
- Made in Sweden using renewable raw materials from the forest
- Based on biocomposite from Woodcomposite Sweden

## 66% reduction of CO<sub>2</sub>-emissions

Clinical waste containers in different sizes are today big part of part of plastic consumption within healthcare. Besides from examination gloves and disposable aprons, clinical waste containers are the biggest product in number of tons per year being incinerated.

According to independent LCA **WoodSafe®** will decrease climate footprint up to 66% just by **replacing today's polypropylene plastic containers** to containers made of renewable material.

## Biocomposite to replace fossil-based plastic

WoodSafe® is made from **biocomposite** optimized to replace a wide range of polymers and it holds a very high tensile strength. The benefits of wood fiber are its strength, natural look, its **renewable raw material** and the low CO<sub>2</sub> footprint.

WoodSafe® clinical waste containers have optimized the mix of wood fibers and polymers with the purpose to meet the requirements of waste containers, according to **UN tests**, and at the same time **minimize the climate impact**.
